Luna Evolans

Systems Architect · Full-Stack & Data

Remote · UTC-5
hello@lunaevolans.dev
github.com/lunaevolans
lunaevolans.github.io

SUMMARY

Linux-native software engineer who likes owning the whole stack: typed front-ends, boring-reliable APIs, event pipelines, and the data science that turns their exhaust into decisions.

Daily-driving Bazzite on a tiling setup. I care about latency budgets, observability, and code that the next person can read at 3am.

EXPERIENCE

Staff Software Engineer · Platform Architecture · Orbital Systems (placeholder)

Mar 2023 – Present · Remote

- Architected the Helios event platform (2B+ events/day) and led its migration off synchronous service chains.
- Set up an SLO program across 35 services, cutting pager volume by 71%.
- Mentor to 6 engineers and author of the internal architecture decision record (ADR) process.

Senior Full-Stack Engineer → Data Science Lead · Meridian Analytics (placeholder)

Jun 2020 – Feb 2023 · Hybrid

- Built Tessera, a real-time analytics workspace used weekly by 3.4k people.
- Started the forecasting practice. The demand model improved WAPE by 22%.
- Introduced typed API contracts (tRPC + Zod), removing a class of production incidents.

Software Engineer · Fieldnote Labs (placeholder)

Jul 2017 – May 2020 · On-site

- Shipped the Python/Django backend and React front-end for a field-data collection product.
- Moved deploys from hand-built VMs to containerised CI/CD, going from weekly releases to daily ones.

SELECTED PROJECTS

- **Helios Event Platform**: Multi-tenant event-streaming backbone that moves 2B+ events/day between 40 services with exactly-once semantics and per-tenant isolation. (Go, Kafka, PostgreSQL, Kubernetes)
- **Tessera Analytics**: Real-time analytics workspace with sub-second queries over 30 days of raw events. Typed end to end, from ClickHouse schema to React components. (TypeScript, React, tRPC, ClickHouse)
- **Quanta Forecasting**: Demand-forecasting pipeline for 18k SKUs. Gradient-boosted models plus hierarchical reconciliation, served as a dbt-native feature store. (Python, Polars, LightGBM, dbt)
- **atomic-dots**: Reproducible Bazzite / Fedora Atomic workstation. A custom OCI image, ujust recipes, and a Hyprland rice with seven hot-swappable palettes. (Fedora Atomic, BlueBuild, Hyprland, Nix)

SKILLS

Systems & Infra	Linux / systemd · Kubernetes · Terraform / Nix · Observability (OTel)
Backend	Go · Rust · Python · PostgreSQL · Kafka / NATS
Frontend	TypeScript · React / Preact · Astro / SvelteKit · WebGL / Canvas
Data & ML	pandas / Polars · scikit-learn · PyTorch · dbt / DuckDB · Forecasting
